JSEA Critique Sheet

No.	Questions	Score	Comments
1	Are each of the basic job steps identified?	0	
2	Did the JSEA address all of the potential hazards involved in the task?	0	
3	Will the recommended safe procedures significantly mitigate or eliminate the potential hazards?	0	
4	Was the accountability assigned in the recommended safe procedures?	0	
5	Was the JSEA submitted by the due date?	0	

JSEA Overall Content and Structure Score (0 - 10):

0

Comments

Note: As stated in the manual, companies must focus their JSEAs on their deck/dive operations. For companies advancing to the world championship, the JSEA should include operational conditions for all three venues; companies should create **ONE** JSEA that covers all three operating environments. This includes the wave tank (wind and waves), the flume tank (current) and the ice tank (cold, icy conditions). In the ice tank for example, companies could consider hazards such as cold, icy conditions. Companies can consider how to mitigate such risks as hypothermia, cold related injuries, slips, trips and falls, and more.
